HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Amendment To The Specification

The recitation of -- now U.S. Pat. No. 6,727,741, -- is to be inserted between "2002," and "entitled" on line 4 of page 1 of the instant specification.

Reason For Amendment

The Examiner's amendment has been made to provide the required continuation data to the instant specification.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

With respect to claims 1-21, there is no cited prior art that discloses a phase-interpolator including a first inverter receiving a first clock signal, a second inverter receiving a second clock signal, a first switch coupled to the first inverter, second inverter and a power source, a second switch coupled to the first inverter, second

inverter and ground, wherein the first switch is off and the second switch is on when the first clock signal is in a first state and the first switch is on and the second switch is off when the first clock signal is in a second state as recited in claims 1, 9 and 17.

With respect to Applicant's arguments, see page 3-5, filed 08 May 2008, with respect to the rejection of claims 1, 3-9, 11-17, and 19-21 under Koizumi (USPN 5,296,757) have been fully considered and are persuasive. As can be seen the inverter of 22 with 23 of Koizumi does not receive "the first clock signal" A, but rather a phase shifted signal C. Clock A and clock C are not the same signal since the phase of clock C is different from that of clock A as disclosed in Fig. 5 of Koizumi. Furthermore, Koizumi's circuit is incapable of operating as a phase interpolator, since its output is dependent upon a single input signal. Koizumi's buffer circuit does not receive two separate clock signals which are interpolated. Rather Koizumi has a single input signal that has a fixed relationship with respect to its output A and not a phase interpolated output signal that is dependent on a "first clock signal" and a "second clock" signal as claimed.

With respect to the rejections of claims 1-21 under Saeki (USPAPN 2002/0030525) and (JP2002-14743), Applicant has filed a certified English translation of Applicant's foreign priority document on 08 May 2008 that antedates Saeki's United States filing date and Japanese publication date. There are no other known publications of Saeki which have been published before Applicant's foreign priority date. Thus the previous rejections have been withdrawn and the claims are allowable over Saeki.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
